**SingHealth Surgery-in-General (SIG) on residents' perceived value on cross-cluster rotations and satisfaction of programme Support.**

## 1 INTRODUCTION

Since 2020, Cardiothoracic Surgery, Neurosurgery, and Plastic Surgery residents from across the 3 clusters, SingHealth, National Healthcare Group and National University Health System have been integrated due to the smaller training positions at the national level as the Singapore Integrated Programme (SGIP).

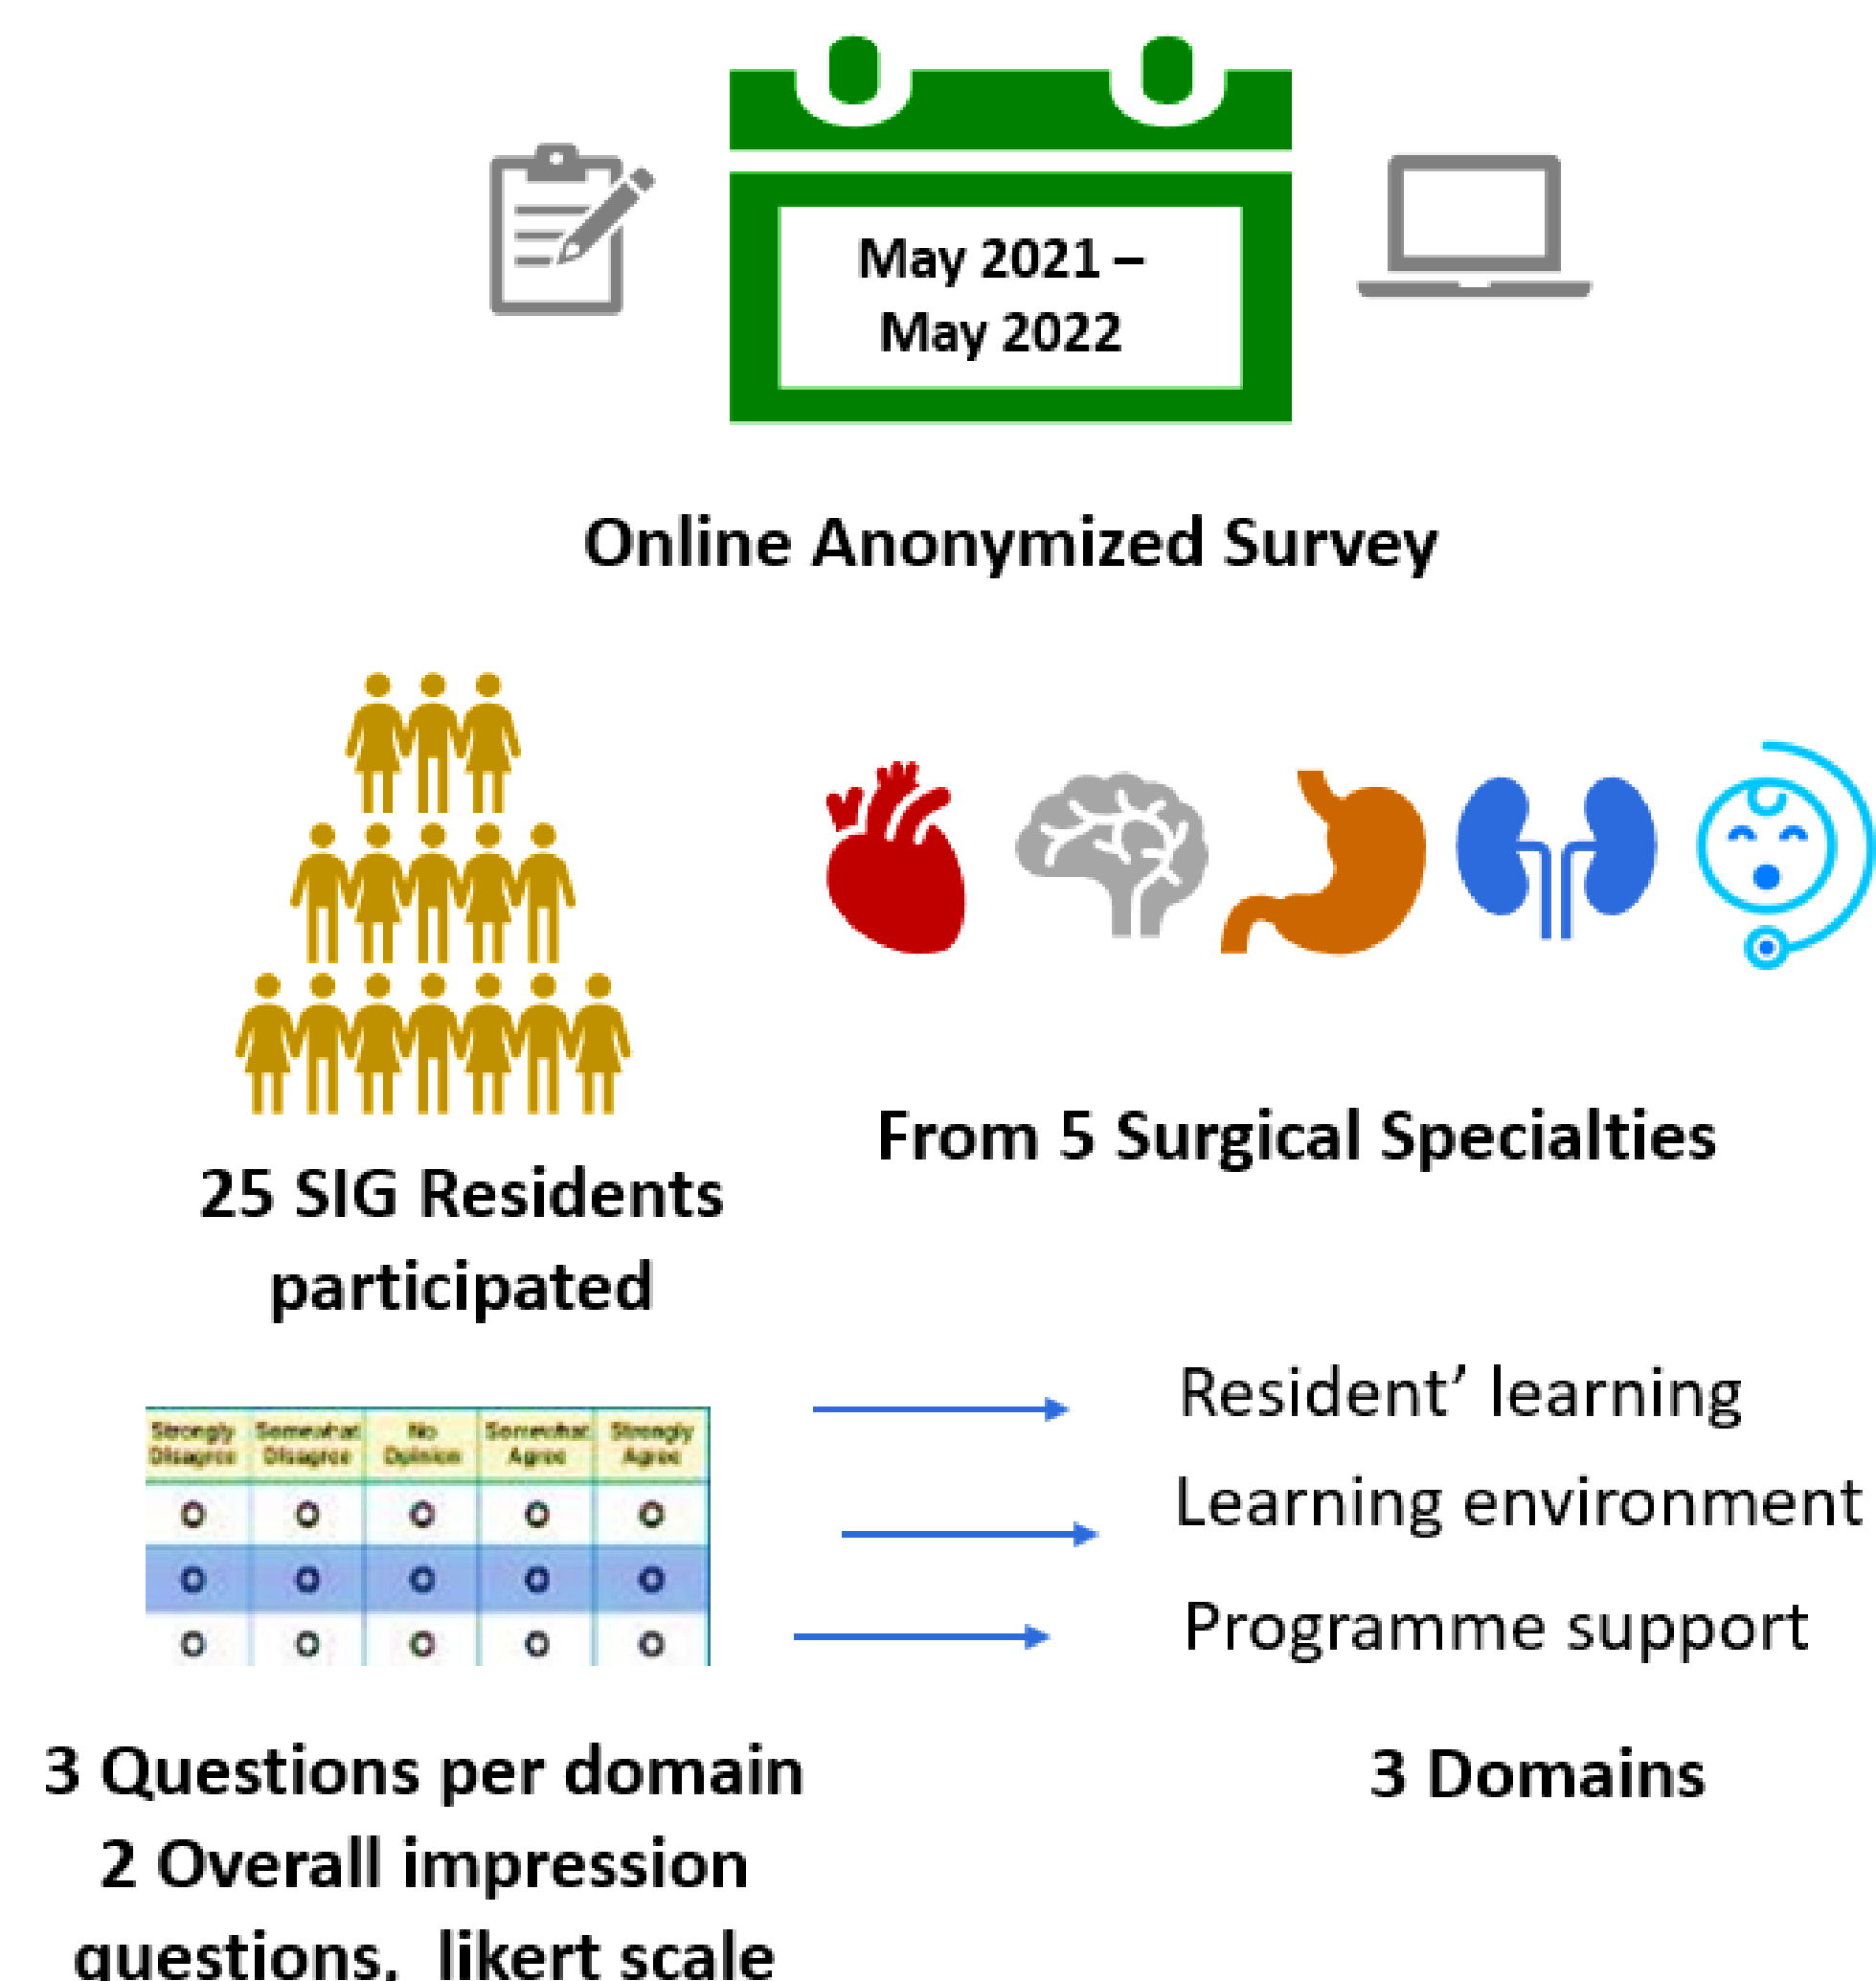

As such, SingHealth SIG now houses the junior residents from all 3 clusters.

## 2 AIMS

Primary aim to assess residents' perceived value in cross cluster rotations.

Secondary aim to assess residents' satisfaction with the programme administration.

## 3 METHODOLOGY

## 4 RESULTS [Scored- 1(least agreement) to 5 (most agreement)]

## 5 CONCLUSIONS

SGIP integration requires residents rotate to different clusters for maximum learning. The majority of residents perceived added value and welcomed cross cluster rotations.

Quality of resident satisfaction remained high after the SGIP integration.
